

## DOUBLE CURVE

Our curved models of 10 m. and 12 m. wide, have the possibility of double arc. This is an important feature, with the double arch, we manage to reinforce the structure while eliminating pieces that prevent storage from a certain height. With these double arches we get diaphanous spaces, of great volume and greater free height in the interior, which gives the structure a large storage capacity.

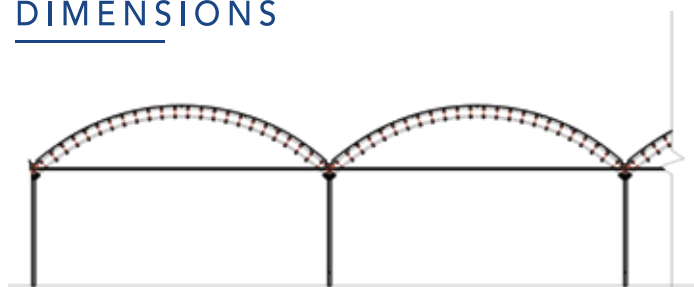

The most widespread uses for this type of structures are: warehouses for the selection and preparation of products, agricultural warehouses, warehouses for irrigation heads, or even farms.

This model facilitates the internal transfer of vehicles, goods and storage of large machinery. They can also have other uses, such as: covering sports courts, multipurpose pavilions, etc.

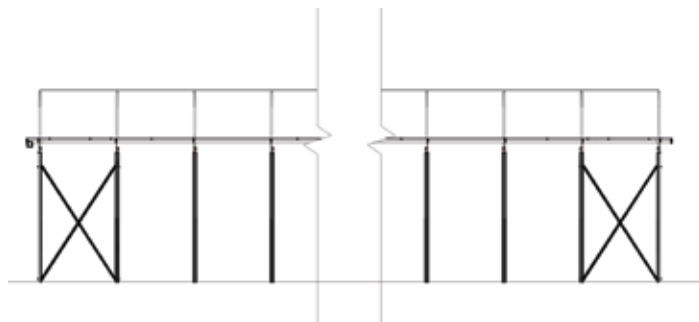

## DIMENSIONS

Indor section

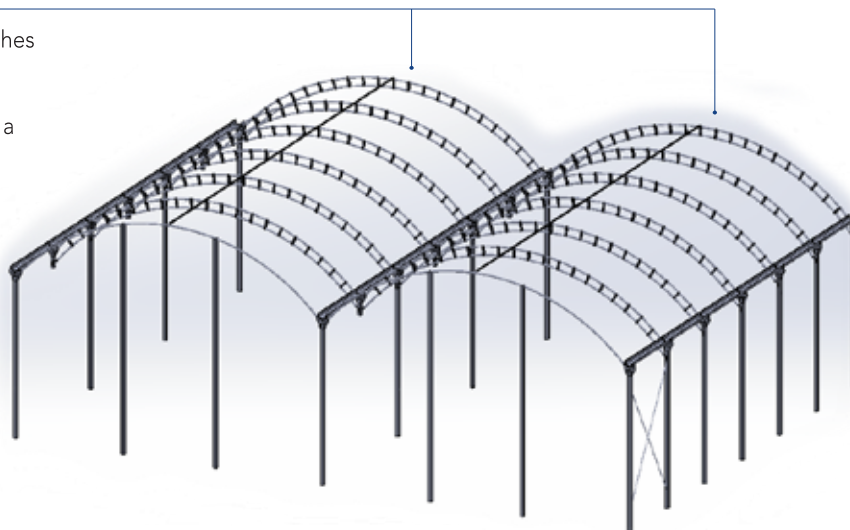

|                         |          |        |          |        |        |        |
|-------------------------|----------|--------|----------|--------|--------|--------|
| Width of bay            | 10,00 m. |        | 12,00 m. |        |        |        |
| Indor modulation        | 2,00 m.  |        | 2,50 m.  |        |        |        |
| External modulation     | 4,00 m.  |        | 5,00 m.  |        |        |        |
| Height under the gutter | 3,5 m.   | 4,0 m. | 4,5 m.   | 5,0 m. | 5,5 m. | 6,0 m. |

## STRUCTURE

### Arches

The shape of the arches allows a zenithal ventilation at high height, which allows a greater ease of air renewal.

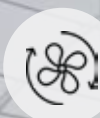

\*Ask for our lattice beams to eliminate pillars, whether interior or exterior.

## CHARACTERISTICS

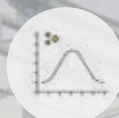

### Ventilations

Possibility of different types of ventilations on the roof.

### Luminosity

In warehouses or structures for fruit packing, etc., opaque roof sheets can be alternated with transparent to provide natural light inside.

### Covering

Possibility of different types of covering.

### Complementary facilities

This model allows the placement of systems such as: lighting, fog system, heating system, etc.

### Applications

The most widespread uses for this type of structures are: warehouses for the selection and preparation of products, agricultural warehouses, warehouses for irrigation heads, or even farms.

### Advantage

This model facilitates the internal transfer of vehicles, goods and storage of large machinery.
